

HYBRID HORIZON

Professional Enterprise Deployment & User Training Guide

PHASE 01

Navigating the Central Dashboard

Interface Overview

The primary landing page provides a high-level visualization of your professional availability for the current month.

Key Components:

- **Dynamic Calendar:** Real-time visualization of your hybrid split (Work From Home vs. Work From Office).
- **Consolidated Counters:** Instant visibility into cumulative totals for WFH and WFO days.
- **Analytical Forecast:** A bar chart highlighting the delta between completed workdays and remaining scheduled obligations.

Workflow Customization

Access the 'Settings' module via the gear icon to align the application with your specific team policy.

Detailed Actions:

- **Input Monthly Quota:** Define the total 'No. of WFH' days permitted by your organization for the current cycle.
- **Establish Default Patterns:** Set your 'Preferred WFH' days to allow the system to suggest an optimized schedule.
- **Data Synchronization:** Changes here update the backend forecasting engine immediately.

Strategic Date Selection

This module allows for specific date-level preference setting to ensure your hybrid balance is met precisely.

Implementation Steps:

- **Month Validation:** Ensure the correct fiscal or calendar month is selected at the top.
- **Iterative Selection:** Check the box corresponding to specific dates you intend to remain remote.
- **Optimization:** Use this list to front-load or back-load WFH days based on project deadlines.

Ad-hoc Adjustments

The calendar interface supports direct touch interaction for real-time status updates as business needs shift.

Operational Statuses:

- **Status Toggle:** Seamlessly pivot between WFH and WFO statuses.
- **Leave Management:** Mark days as 'Leave' to pause forecasting and maintain data integrity.
- **Holiday Tracking:** Designate fixed company holidays to ensure they do not count against your WFH quota.

SUPPORT & MAINTENANCE
